

THERMATEX Symetra Rg 2.5-10

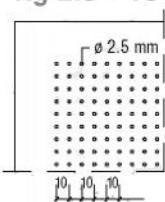

■ Perforated Panel Design Trends

THERMATEX Symetra is a regularly perforated mineral panel from AMF that is part of the Material and Design range. Surface perforations create a geometric effect that is harmonious and elegant. A wide range of perforations sizes and holes centres can be produced, creating a variety of visual appearances. The choice of perforation patterns, sizes and edge details combined with fire protection and sound absorption gives a wide scope for contemporary ceiling design.

■ All AMF THERMATEX Symetra surfaces

Rg 2.5 - 10

- Hole diameter: 2.5 mm
